"Bridgea GATEWAY" and "onti"

Pass the IHE※1-J2024 Connectathon Interoperability Test※2

---

*This release is an English translation of "「Bridgea GATEWAY」および「onti」IHE-J2024 コネクタソン接続実証試験に合格", with a priority given to Japanese for content and interpretation. The indication is specifically for Japan only and not for other countries.

TOKYO, JAPAN – January 16, 2025 - PDRadiopharma Inc. (President: Masato Murakami, Headquarters: Chuo-ku, Tokyo) announces that its "Bridgea GATEWAY※3" (medical data communication software) and "onti※4" (medical radiation dose management system) have successfully passed the IHE-J2024 Connectathon interoperability test, proving that both products comply with IHE standards.

Benefits of Complying with IHE Standards

● These products comply with IHE standards, ensuring they can be introduced and operated with confidence.

● These products connect using IHE standards, enabling smooth data exchange between different systems. This leads to improved efficiency in medical operations, as well as reduced effort and costs.

● Products that comply with the IHE standard will make it easier to expand the system in the future and integrate it with other systems. It also allows you to choose the most suitable system from a wider range of options.

PDRadiopharma Inc. has been participating in the "IHE-J Connectathon" since 2022 and is actively working towards the standardization of medical information systems. In addition to supplying radiopharmaceuticals, PDRadiopharma Inc. will continue to provide comprehensive solutions that address information management challenges by leveraging data and digital technologies combined with medical digital transformation.

※1 IHE (Integrating the Healthcare Enterprise) is an international project that promotes interoperability between medical information systems and advances the standardization of medical information. IHE (Integrating the Healthcare Enterprise) is an international project that promotes interoperability between medical information systems and advances the standardization of medical information.

※2 Connectathon is a coined term combining 'connect' and 'marathon.' The Interoperability Test is an annual event where systems and devices aiming for IHE compliance gather for several days to conduct interoperability testing.

※3 **Bridgea GATEWAY** is an automated radiopharmaceutical dispensing device.

※4 **onti** is an information system that supports the electronic recording, management, and optimization of medical radiation doses. It complies with international standard data flows for handling medical radiation dose information.

About PDRadiopharma

PDRadiopharma, a wholly-owned subsidiary of PeptiDream from 2022, has been providing high-quality radiopharmaceuticals through the research and development, manufacturing, regulatory and sales as a forerunner in the field of radiopharmaceuticals, since it started its business in 1968. Currently PDRadiopharma offers 22 radiodiagnostic products (spanning both SPECT and PET products) and 8 radiotherapeutic products (3 product categories) in Japan. Additionally, PDRadiopharma and PeptiDream are developing a broad pipeline of radiotherapeutics and radiodiagnostics for both the Japan and global markets.
