Information on the presentation is as follows

NEW DEVELOPMENT OF A QUALITY ASSURANCE STRUCTURE REPORT (QASR) FOR ACCEPTANCE AND CONSTANCY TESTING

Session Title: W2-SPIN. Imaging Informatics Wednesday Morning Poster Discussions

Session Start: 12/3/2025 9:00 AM

Location: LEARNING CENTER

PDRadiopharma is introducing a new standard format, the Quality Assurance Structure Report (QASR), designed for the CT accuracy management function built into our medical radiation dose management system, “onti.”

Traditionally, quality control has been handled separately within each CT scanner, making it difficult to review performance in a time-series manner or to establish standardized practices within a facility.

By implementing QASR, healthcare providers can streamline and standardize quality assurance practices for medical equipment and improve information sharing across multiple devices.
